

Finding the stream URL using Chrome Dev Tools or Firebug [Edit](#)

Using Google Chrome's built-in developer tools, or the Mozilla Firefox equivalent, Firebug, you can also find the mp3 stream url. The procedure below is for Google Chrome, but it should be similar in Firefox

1. Open the page where the player is located.
2. Press F12 to open the developer tools
3. Open the 'Network' tab in the developer tools window
4. Refresh the page
5. Start the stream
6. Now, look in the developer console to find the mp3 stream, it will most likely be the largest file (tip: sort by size), and the longest running process.
7. Then, right click the path and press 'copy link'
8. Paste this link in the MusicBee New Radio Station box and happy listening!
